Company's Representative

Problem

Prior to deploying StarWind VSAN, Jaco IT-Solutions had non-redundant single physical server solutions. The company was seeking to introduce high availability into their infrastructure.

Solution

StarWind gave Jaco IT-Solutions what they needed for storage. The company ensured high availability reducing IT TCO.

Problem

Jaco IT-Solutions had single physical server solutions without redundancy. No high availability was possible in their current infrastructure that compromised the overall reliability due to a single point of failure.

Solution

Jaco IT-Solutions was seeking for a possibility to ensure redundancy at a reasonable price. The price vs. performance comparison has pointed the company in the direction of StarWind. As a result, the **StarWind software-defined storage stack** provided reliable and affordable storage. For the future, Jaco IT-Solutions will consider using **StarWind** whenever highly available storage is needed. Currently StarWind gives the company what they need for storage.

StarWind provided reliable and affordable storage. Whenever we need highly available storage we will certainly consider the use of StarWind.
