#### Problem

The company needed shared storage to resolve the problem of resource allocation and get more flexibility.

#### Solution

With StarWind VSAN, the company got reliable shared storage working on commodity off-the-shelf hardware, allowing it to distribute resources and grow virtualized environments as needed.

# The Peelle Company intensifies its order processing operations by distributing resources with the help of StarWind Virtual SAN (VSAN)

## Problem

Before StarWind Virtual SAN (VSAN) deployment, the infrastructure of **The Peelle Company** consisted of network-attached storage (NAS) with Hyper-V on top. The problem with the resource distribution was the main one that needed to be solved. The Peelle Company tried to obtain a lot more flexibility in creating its IT environment and add more resources as it grew.

## Solution

**StarWind VSAN** was the only product chosen by **The Peelle Company** at the first try to resolve a resource allocation issue.

The implementation of shared storage into its IT infrastructure granted the company the needed flexibility and allowed its NAS to grow its virtualized environments on the go.

All the company's needs are currently met. The Peelle Company was also amazed by the responsiveness of StarWind Support Team and their professional help in every difficult situation.

The StarWind product does exactly what it's supposed to!  
The staff is very personable and informative.
