# North Valley Health Center Ensures That Their Patients Always Enjoy Only Highly Available Systems Thanks to StarWind VSAN

## North Valley
### HEALTH CENTER

**About the Company**

**North Valley Health Center** has been providing the residents of Northwestern Minnesota since 1905! It's a primary care medical facility, providing family and specialty care, inpatient care and swingbed, 24HR ER, and multiple other medical services.

**Company Profile**

Hospital

**Contact Person**

**Josh Benson,** IT Manager

**Problem**

The hospital was looking to increase its infrastructure's performance and ensure HA.

**Solution**

StarWind offered the most performant and cost-efficient HA solution that the hospital could find.

## Problem

Being a small, rural hospital and clinic, **North Valley Health Center** had a modest IT infrastructure comprised of shared network storage governed by VMware vSphere.
The hospital was looking to visibly increase its IT environment's performance as well as achieve high availability. They tried VMware vSAN at first but, eventually, decided to go with StarWind since it was better value.

## Solution

North Valley Health Center chose **StarWind Virtual SAN** to cover all its infrastructure's pain points. The hospital's IT resources and applications were provided with a large boost in performance and allowed for much faster high availability (HA). Now, the staff can definitely rest assured that their systems will be performing at their maximum and never fail them whatever the disaster.

> StarWind has more than satisfied all our requirements.
